

BEG Group's Big Switch® as Alternative BMP in Ohio

- **May 11, 2018**
- BEG Group has approval to suggest to clients working erosion/sediment control projects in Ohio, other than ODOT projects, that we have been given the verbal understanding that since Big Switch® is officially called out in Pennsylvania Department of Environmental Protection's Alternative Best Management Practice revision from March 29th, 2017 we have the approval from John Mathews, Ohio DEP Manager of Stormwater Technical Assistance at the Division of Surface Water, towards use of Big Switch® on said projects until his office can address this in Ohio's Best Management Practice interests more directly.
- If clients need further verification to this end they can call on John Mathews for confirmation on the above at (614) 265-6685 or John.Mathews@epa.ohio.gov .
- It is BEG Group's desire to be the best partner we can be in representing the environmental interests throughout the United States of America and especially within the State of Ohio where we all have the responsibility to oversee protocol that assists developers, contractors, designers with controlling the negative impacts associated with new and existing development, including increased runoff, polluted storm water, stream erosion, algae bloom issues and loss of floodplain services.
